ELECTRONIC VISIONS, INC.

PC-LOG 4

PC-LOG 4

PC-LOG 4 is an Electronic Visions, Inc. product which replaces serial terminals and/or logging devices with an intelligent micro-computer interface. Data normally lost on conventional terminals is now captured and recorded to disk or WORM -based log files. The voluminous amounts of paper generated by hardcopy logging devices is eliminated. PC-LOG allows rapid location of important messages by providing review and search capabilities. Archiving is supported through disk copies and serial transfers of log files.

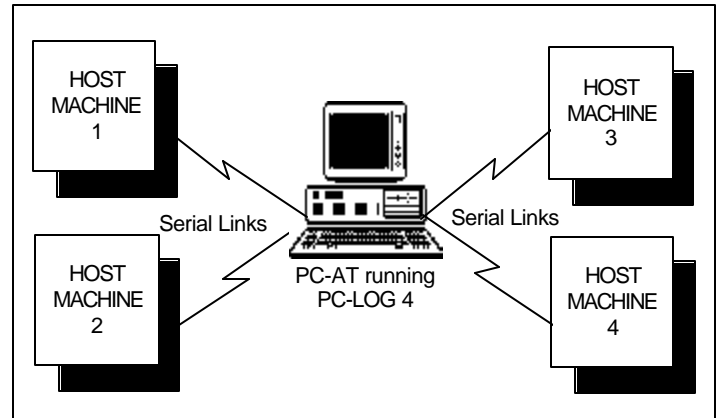

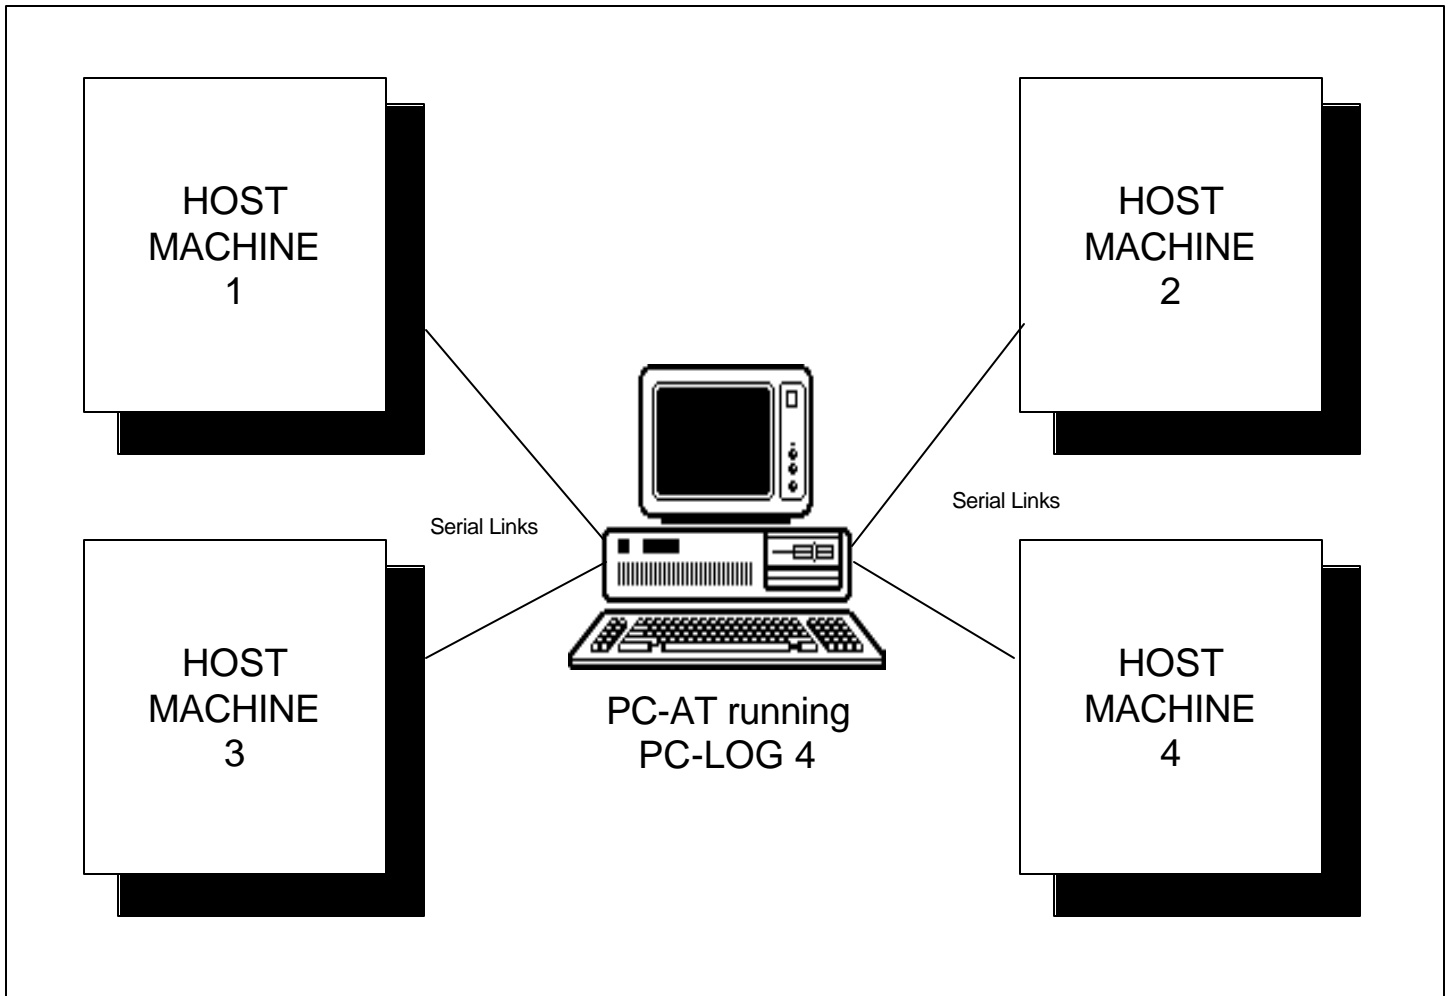

Figure 1, Typical PC-LOG 4 Connection

FEATURES

» Connect to four different host systems simultaneously

» Log each host's messages to separate, local disk files, with optionally different drives and directories

» Review and search any log file while logging continues (including the ACTIVE log files)

» Set Date and Time in the PC from the Host System and enter Date and Time on the Host System

» Context sensitive help

» Keeps either reusable weekly log files (SUN.LG1 through SAT.LG1) or daily log files (90JUL17.LG1)

» Data rates of up to 19.2K baud with or without flow control

» Software (XON/XOFF) or hardware flow control

» Blank line and trailing blank suppression

» Simulated full/half duplex operation

» Automatically respond to MODCOMP reboot sequence (H04, GO, /Date, /Time)

» Automatically uses text display modes up to 132 columns by 60 lines

CONFIGURATION

» Each host session is separately configurable

» Serial communication parameters

» Logging behavior

» End of Day time (Not to Midnight)

» User interface behavior

» Shift lock states

» Screen colors

REQUIREMENTS

» IBM® PC-AT or 100% Compatible with a fixed disk drive

» Standard DOS ports for COM1 and COM2

» EVI Specified ports for COM3 and COM4

» DOS 3.x (DOS 4.x if log files are to exceed 32mb in size)
